

Psychological Impact of COVID-19

REC reference: 20/HRA/1934

Version 1.1 29Oct20

Researchers from a collaboration group would like to invite you to take part in a short questionnaire exploring the psychological impact of the coronavirus, its effect on our emotions, behaviour and wellbeing. This is the second phase of recruitment. If you took part in the first phase of the study, you are still able to take part in this second phase, conversely if you did not take part in first phase; you are still able to take part in this second phase

The aim of this survey is to better understand how the coronavirus pandemic and resultant restrictions/lockdown are affecting our day to day lifestyle. We hope to find out what is helpful for people during this time and also what may be causing some people to be affected more than others in terms of their wellbeing.

Anyone over the age of 16 with access to be able to complete this online questionnaire can take part.

It is up to you to decide whether to take part or not. You are free to withdraw from the study at any time, without giving a reason and without consequence. This survey is completely voluntary and you can stop completing it at any time. You also do not have to answer any questions you don't want to, you can just skip them.

Want to find out more? Just click on this link: <https://bit.ly/36ok8nK>

Or scan the QRS code below

Please choose from one of the participating GP sites below in the survey drop down box
